

Submersible Axial Flow Pumps

RSX Series

RX.200.55

RX.300.110

The concept of utilising a submersible pump system is favoured due to the reduction or elimination of superstructure, noise, cooling issues, installation and operation costs. Remko Axial Flow Pumps are compact high performance pumps. They benefit with design features that reduce maintenance requirements and maximise reliability.

Max Head: 9m

Max Flow: 1333 l/sec

OPTIONS AVAILABLE

- Condition monitors and motor protection
- Bearing Thermal Protection (BTP) enables preventative maintenance prior to bearing failure. This eliminates costly and possible destructive damage
- Seal probes monitor the seal chamber oil for indications of any seal leakage
- Thermal motor protection
- Special coatings
- Zinc anodes for sea water installations

PERFORMANCE CURVES

SPECIFICATIONS

Pump Model	Outlet (mm)	Power (kW)	Amps (415 volt)	Speed (rpm)	Solids Passage (mm)	Free Standing			Well Type		
						Width (mm)	Height (mm)	Weight (kg)	Width (mm)	Height (mm)	Weight (kg)
